

„STRENGTH AND GROWTH COME
ONLY THROUGH CONTINUOUS
EFFORT AND STRUGGLE.“
- Napoleon Hill

WE ARE PROCON

Protein Consulting Sweden AB – **PROCON** – was formed in 2007 by an experienced and creative team. The aim was to develop and market new vegetable based protein, fiber and starch products for feed applications. **PROCON** has a sustainable production procedure and forms an effective link between the primary process industry and the compound feed industry. The strength of this link is based on worldwide networks and competence related to innovative feed for better growth and health of animals and higher profitability with technical improvements for our customers.

We meet the challenge in finding new fields of application for the use of proteins, fibers and starches derived from plants. Uniting our skills and experience is what in short makes **PROCON** a “supplier of growth”.

WE WORK FOR

We offer high quality feed products for clients from the food, feed and bio energy processing industries, including producers of pet food, aqua feed, agri feed and fur animal feed. **PROCON** supplies customers all over the world and works in close collaboration with them to find individual solutions for the different needs.

We also focus on supporting our clients and finding logistic solutions for optimized processes. Production is European-based and the goods are then transported directly to the feed plant. Together with our partners we stand for product, market and business development.

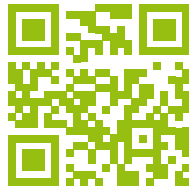

WE PRODUCE

Peas, potatoes, beans and cereal grains form the raw material basis for our product range, while new crops and processing techniques are constantly evaluated and developed in close cooperation with our key partners.

PROCON'S protein concentrates with a high percentage of high quality proteins, as well as formulated and extruded starch products and mixtures, provide several possibilities for feed formulators and ensure optimal nutritional and technical functionality.

Our constantly improved products convince with a good amino acid composition and low antinutritional factors and have other excellent properties such as a high fat binding capacity and an improved pellet durability. The efficiency of PROCON products replaces other animal and vegetative protein sources and forms the ideal solution for our clients.
